Methods and techniques in video editing post work  
By Harald Berntsen | Updated Apr 9, 2019  
Abstract: this article about the editing video, some tips from the most basic video editing staff, necessary to find a place to shear shear points method, has the sense of rhythm, film editing method is not only a right, clips, the purpose of the action editing in the fixed rules of six aspects to introduce video editing techniques.  
1. The vision to find the best expressions and movements in limited materials. 2. Ability to clip material and discover how it connects to the next frame. 3. Ability to use images and select music, and creativity to create melodies and plots. 4. The editor should also endow the film composed of continuous still pictures with the sense of beating to inject life into the image. 5. The editor will naturally find out the best expression in many shots and find out which is the cutting point, which is the sense of melody of the clip. At the same time, the whole picture of the work will be gradually presented in many photographic materials. Through the material, see the work should look.

Two ways to find shear points: when should you cut and connect? It is undoubtedly one of the important tasks for editors to find the cutting point. There's a little bit of caution here, this is the vertex of the screen. The so-called vertex of the picture refers to the turning point of the action and expression. For example, when the arm of the character is fully extended, when the boy's head after nodding and greeting ends, when the sphere moves and is about to fall, the moment of taking back the knife, etc. An image is a continuous sequence of still images, because the film in front of it will form a residual image in people's eyes, so the picture on the film looks dynamic. Therefore, the more intense the movement, cut at the top of the picture or at the moment before the action starts, will produce a strong residual image effect on the film behind, leaving a deep impression on the audience.
